2022 - 2028 STRATEGY

Schéma régional de développement économique, d'innovation et d'internationalisation (Economic development, innovation and internationalisation scheme)

Main goal : make the region the most beautiful region in Europe and a European model of sustainable and resilient economic development

This strategy focuses on few sectors :

- ENERGIES
- INDUSTRY
- TRANSPORTS
- TOURISM
- AGRICULTURE

2022 - 2028 STRATEGY

The strategy is decomposed in 4 main axes :

AXIS 1: Tend to 100% climate-positive regional growth
AXIS 2: Tend to a sovereign industrial region that is more resilient in the face of crises
Axis 3: Making Provence-Alpes-Côte d'Azur one of the most innovative regions in Europe
AXIS 4: Accelerating business growth: skills, internationalization, development, and transfer
AXIS 5: A simpler, more accessible, and more transparent region promoting balanced regional growth

STRATEGY LEVERS FOR DECARBONIZATION

1. The "Eco-Conditionality" Strategy (Financial Leverage)

This is the most powerful regulatory tool in the document.

- Mechanism : The Region no longer grants "neutral" subsidies. Every company seeking regional funding must demonstrate a commitment to the ecological transition.
- Strategy : Using public money as a catalyst to force the private sector to adopt green practices (carbon footprint audits, waste reduction plans, etc.).

2. The "Industrial Symbiosis" Strategy (Circular Economy)

Instead of factories working in isolation, the strategy promotes Industrial and Territorial Ecology (EIT).

- Mechanism : Creating interconnected industrial ecosystems, particularly in the Fos-Berre and Aix-Marseille areas.
- Strategy : Turning one factory's waste into another's raw material. A key example is capturing "fatal heat" (industrial waste heat) to power urban heating networks or other industrial processes.

STRATEGY LEVERS FOR DECARBONIZATION

3. The "Energy Mix Diversification" Strategy (Technological Sovereignty)

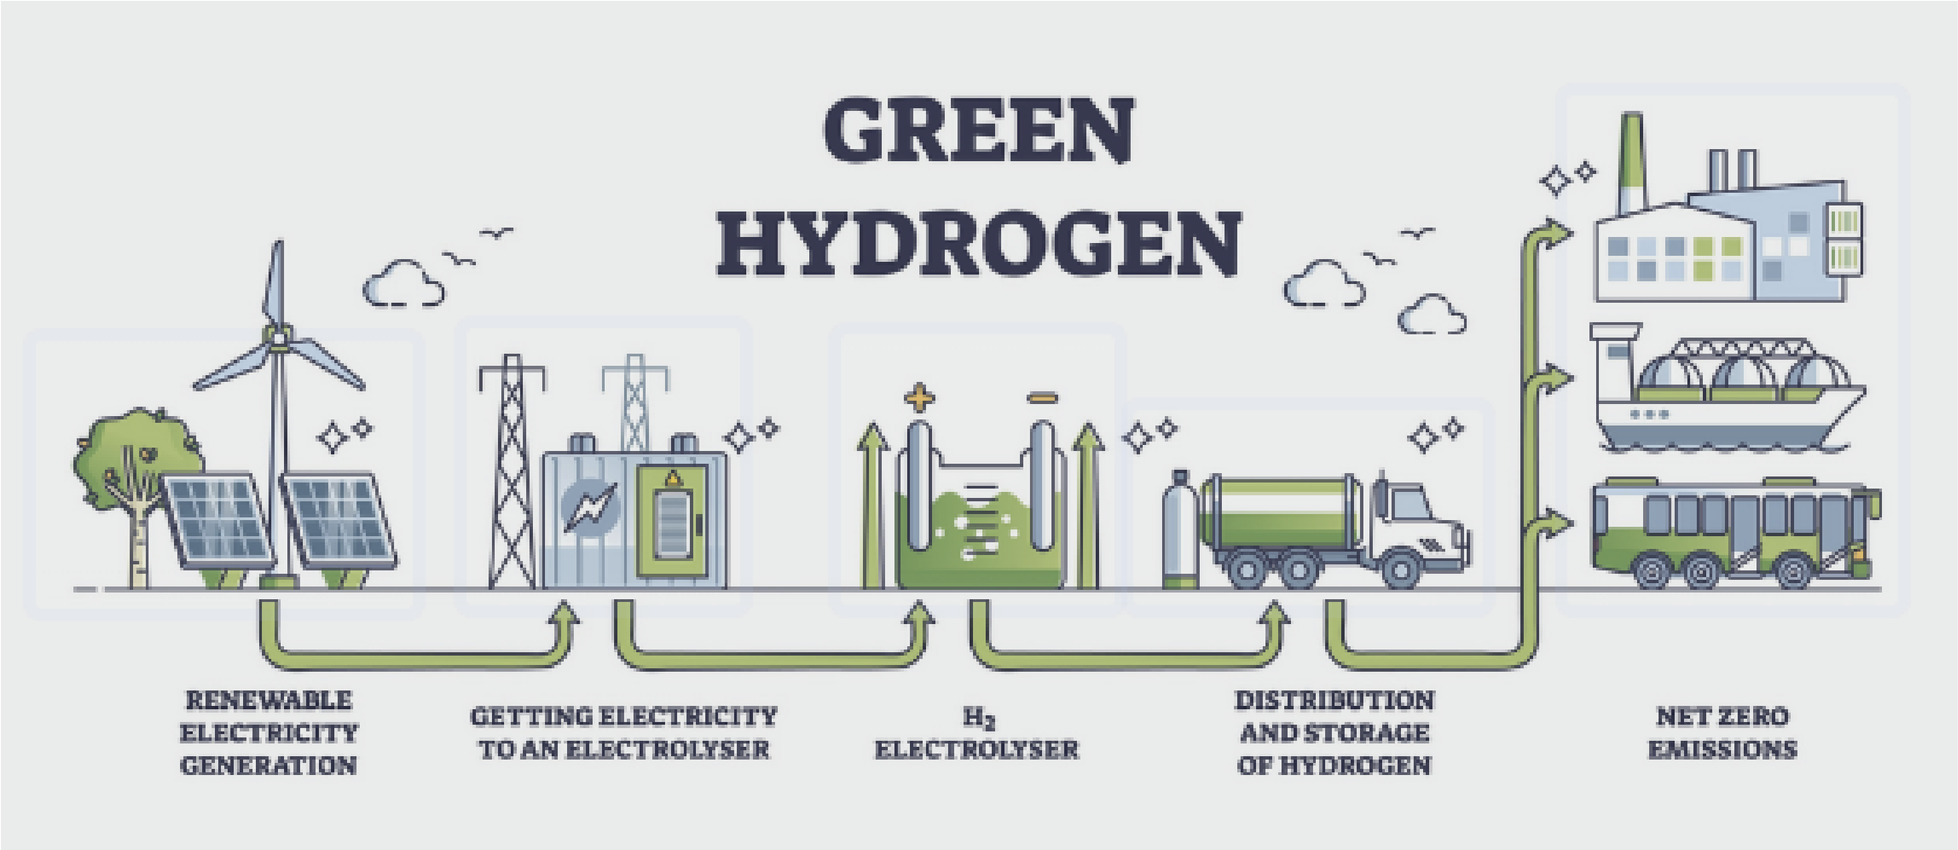
The region aims to decarbonize its energy supply to provide "clean" power to its industries.

- Mechanism: Massive investment in three specific technologies: Green Hydrogen, Floating Offshore Wind, and Solar Energy.
- Strategy : Reducing dependence on fossil fuels to protect local industries from energy price volatility while simultaneously meeting carbon reduction targets.

4. The "Green Port & Smart Logistics" Strategy (Infrastructure Modernization)

Since the region is a major Mediterranean gateway, the decarbonization of transport is a priority.

- Mechanism: The "Zero Smoke Stopovers" (Escales Zéro Fumée) initiative and the development of rail/river freight.
- Strategy: Electrifying maritime and land infrastructure to reduce the carbon footprint of the "last mile" and logistics chains.



GREEN HYDROGEN
RENEWABLE ELECTRICITY GENERATION
GETTING ELECTRICITY TO AN ELECTROLYSER
H_2 ELECTROLYSER
DISTRIBUTION AND STORAGE OF HYDROGEN
NET ZERO EMISSIONS

INDUSTRIAL STRATEGY

Main goals

- **Industrial Sovereignty**: Strengthen strategic sectors (health, energy, defense, food, tech) to reduce dependency and boost resilience.
- **Reindustrialisation**: Support SMEs, mid-sized companies, and startups to adopt Industry 4.0 (AI, robotics, digitalisation).
- **Supply Chain Security**: Optimise logistics (rail, port, short circuits) and leverage the Grand Port Maritime de Marseille as a Mediterranean hub.
- **Attractiveness**: Promote the region’s assets (climate, infrastructure, talent) to draw investment and skilled labour.
- **Land Optimisation**: Identify and upgrade industrial land, rehabilitate brownfields, and create eco-labelled parks.

Main Tools

- OIRs (650 projects analysed, 114 supported, €1.5bn investment)
- FIER & Sud Accélérateur
- Terra Nea (energy transition fund)
- Fonds de transition juste
- Campus des Métiers
- EU & France 2030 partnerships
